

TRD系列空调离心风机

TRD系列空调离心风机

TRD SERIES CENTRIFUGAL AIR-CONDITIONING VENTILATOR

# TRD系列空调离心风机

## TRD SERIES CENTRIFUGAL AIR-CONDITIONING VENTILATOR

### 一、概述

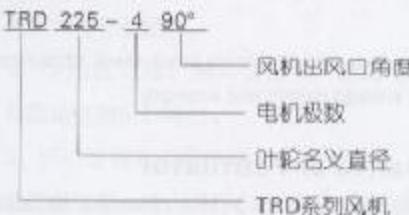

TRD系列空调离心风机系引进德国和日本先进技术，通过公司工程技术中心进行吸收、消化、提高而研制开发的低噪声紧凑型风机，额定流量在1000 m<sup>3</sup>/h~18000 m<sup>3</sup>/h，采用外转子电机直联，产品经合肥通用机械研究所等权威机构检测，具有效率高、噪声低、流量大、体积小、结构紧凑等特点，广泛应用于柜式空调器、变风量空调器及其他暖通空调、净化、通风等设备。

### Outline

TRD Series centrifugal air-conditioning Ventilator is a low-noise compact ventilator successfully developed by introducing the international advanced technology from Germany and Japan. The volume ranges from 1000m<sup>3</sup>/h~18000 m<sup>3</sup>/h. The ventilator can be directly driven by motor with external rotor, the product have been inspected by some of the authorized organs, such as Hefei General Machine institute. They have the features of high efficiency, low noise, large flow, small volume and compact construction and are used for cabinet air-conditioner, air volume changing air-conditioner, heating air-conditioner, purifier, ventilator, etc.

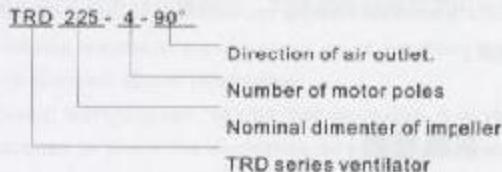

### 二、产品命名方式

TRD系列空调离心风机型号命名方式由叶轮名义直径及电机极数组成：

### Code of Products

The code of TRD series centrifugal air-conditioner ventilator consists of nominal diameter of impeller and number of motor poles.

### 三、产品结构

TRD系列空调离心风机主要由机壳、叶轮、支架、电机、出风口法兰组成。

#### 1. 机壳

机壳采用优质热镀锌钢板制成，侧板具有符合空气动力的外形，并使风机体积达到最小，侧板进风口处设有进风集流器，使气流无损失地进入叶轮。蜗壳板用咬合加气焊的方式与侧板连成一体。在蜗壳侧板上预设了一系列的柳螺母孔，以便用户按自己需求的出风口方向进行安装。

### Structure of Product

TRD Series ventilator consists of scroll, impeller, frame, motor and air outlet flange.

#### 1. Scroll

The scroll is made of high quality hot-galvanizing steel. The side plates take the shape according to aerodynamics and make the ventilator volume minimum. On the air inlet of side plate there is an inlet cone to make the air stream enter the impeller without loss. The scroll plate is fixed on the side plates by way of biting plus gas welding as a whole. On the side plate of the scroll there are many riveting nuts to carry out installation according to air outlet direction needed by the customer.

## 2. 叶轮

叶轮采用优质镀锌钢板制造，叶片设计成符合空气动力的特定形状，使效率最高、噪声最低。叶片采用铆爪固定在中盘及后盘上，在最大功率连续运行时保持足够的强度、刚度。叶轮经高精度动平衡校验，平衡精度达ISO2.5级。

## 3. 支架

TRD系列空调离心风机支架采用优质镀锌钢板制成，支架安装方向可根据用户的实用需求进行安装。

## 4. 电机

TRD系列空调离心风机配用YDW和YDW2系列外转子低噪声三相异步电动机，该电机具有轴固定，外壳旋转的特点。叶轮安装在电机外壳上，由电机外壳旋转直接驱动。YDW2系列电机可采用三相调压器、可控硅调压器、变频器等手段，实行无级调速，以适应系统负荷多变的要求。

## 5. 法兰

法兰采用优质镀锌钢板制成，外观精美并具有足够的刚度和强度。

## 四、风机性能

1、本样本中风机性能均指在标准状态下的性能。即指风机进气状态为：

进气压力  $P_a = 101.325 \text{ Kpa}$

进气温度  $t = 20^\circ\text{C}$

进气气体密度  $\rho = 1.2 \text{ kg/m}^3$

若用户实际使用的气体进气状态或使用的风机转速改变时则可按下列关系换算：

$$\frac{V_1}{V_2} = \frac{n_1}{n_2}$$

$$\frac{P_1}{P_2} = \frac{n_1^2}{n_2^2} \times \frac{\rho_1}{\rho_2}$$

$$\frac{N_1}{N_2} = \frac{n_1^3}{n_2^3} \times \frac{\rho_1}{\rho_2}$$

## 2. Impeller

The impeller is made of high quality hot galvanizing steel sheet and is designed to a special configuration to aerodynamics to make the efficiency highest and the noise lowest. The impeller is fixed on the middle disk plate and back disk plate; with riveting grippers. The impeller has enough rigidity during continuous rotation with maximum power. The impeller is dynamism balanced up to grade ISO2.5.

## 3. Frame

The frame of TRD series ventilator frame is made of high quality galvanizing steel sheet. The direction of base plate installation can be carried out according to the different requirements of customers.

## 4. Electric Motor

The YDW and YDW2, which are low noise three phase asynchronous motor with external rotors, are used for matching TRD series ventilator. The electric motor features the fixed shaft and the rotating scroll. The impeller is installed on the external casing of the motor. The rotating casing will drive the impeller. The YDW2 series motor can be provided with three-phase voltage regulator, thyristor voltage regulator, frequency converter and etc. to realize stepless speed regulator to satisfy changeable load in system.

## 5. Flange

The flange is made of galvanizing angle steel, obtaining fine appearance, enough rigidity and strength.

## Performance of Ventilator

1. The ventilator performance in this catalogue denotes the performance in standard conditions. It denotes air inlet conditions of ventilator as follows:

Inlet air pressure  $P_a = 101.325 \text{ Kpa}$

Inlet air temperature  $t = 20^\circ\text{C}$

Inlet gas density  $\rho = 1.2 \text{ kg/m}^3$

If the practical air inlet conditions of customer or the speed of the operating ventilator changes, the conversion can be carried out according to the following expression:

$$\frac{V_1}{V_2} = \frac{n_1}{n_2}$$

$$\frac{P_1}{P_2} = \frac{n_1^2}{n_2^2} \times \frac{\rho_1}{\rho_2}$$

$$\frac{N_1}{N_2} = \frac{n_1^3}{n_2^3} \times \frac{\rho_1}{\rho_2}$$

$$\frac{P_1}{P_2} = \frac{n_1^2}{n_2^2} \times \frac{Pa_1}{Pa_2} \times \frac{273+t_2}{273+t_1}$$

$$\frac{N_1}{N_2} = \frac{n_1^2}{n_2^2} \times \frac{Pa_1}{Pa_2} \times \frac{273+t_2}{273+t_1}$$

上述公式中

① 流量  $V_1$  (m<sup>3</sup>/h)、全压  $P_1$  (Pa)、转速  $n_1$  (r/min)、轴功率  $N_1$  (kW) 由性能曲线图上查得。

② 右下角 “1” 为用户实际使用气体进气状态下所需的性能参数。

③ 上述公式中略去了相对湿度的差别。

2、本样本中的风机性能按GB1236-2000标准检测，风机噪声按GB2888-1991标准在离进风口1米处测定的声压级指标。

$$\frac{P_1}{P_2} = \frac{n_1^2}{n_2^2} \times \frac{Pa_1}{Pa_2} \times \frac{273+t_2}{273+t_1}$$

$$\frac{N_1}{N_2} = \frac{n_1^2}{n_2^2} \times \frac{Pa_1}{Pa_2} \times \frac{273+t_2}{273+t_1}$$

Where:

① Volume  $V$  (m<sup>3</sup>/h), total pressure  $P$  (Pa), speed  $r$  (r/min), and shaft power  $N$  (kW) can be obtained from performance chart.

② Asterisk “\*1” on the upper right corner denotes the performance parameter need by the customers in practical gas inlet conditions.

③ The difference in relative humidity is omitted from the above-mentioned formulas.

2. The performance of the sample ventilator is tested in accordance with GB1236-2000. Its sound pressure level is measured according to GB 2888 -1991 at the point meter from the inlet.

## 五、说明

1、风机配用电机功率是指在特定工况下，轴功率加上电机容量安全系数而言，并非出风口全开时所需的功率，因此为防止电机超功率运转而烧毁，严禁风机未加外界任何阻力进行空运转。

2、风机在运输、装卸过程中严禁撞击或堆放于潮湿、有腐蚀性物品的场合。

3、风机安装前应用手或杠杆拨动叶轮，检查是否有过紧或碰撞现象，确认没有这些现象时方可进行试转。

4、风管与风机进风口、出风口之间连接时尽量采用软连接，接头不得拉紧。

5、风机安装后检查机壳和其他壳体内部，不应有掉入、遗留的工具和杂物。

6、风机正式运转前，需检查电机的转向是否符合风机转向的要求。

## Instructions

1. Matching electric motor power of ventilator denotes shaft power plus safety coefficient of electric motor capacity in special operating condition, it does not denote the power required during full opening of air outlet. Therefore no-load running of ventilator without any applied resistance is strictly prohibited in order to avoid burning out of the motor caused by its operation at over rated power.

2. During transportation, charge and discharge, it is strictly prohibited to shock the ventilators or put them in wet and corrosive place.

3. Prior to installing ventilator, rotate the impeller by hand or stick to check for tightness or impact. If it is ensured that there is no tightened and impact, then installation can be carried out.

4. Soft connection between air pipe and ventilator air-inlet and outlet should be made as possible. The joints should not be tightened too much.

5. After installing the ventilation, the scroll of ventilator and internal parts of other casing should be inspected. There should not be tools and extra matters remained in the casing.

6. Prior to official operation of ventilation, it is necessary to check the rotating direction of both motor and ventilator for their coordination.
